

Grizzle Growth ETF
Trading Symbol: DARP
Listed on NYSE Arca, Inc.
Summary Prospectus
November 28, 2024
www.etf.grizzle.com

Before you invest, you may want to review the Grizzle Growth ETF (the “Fund”) statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated November 28, 2024 are incorporated by reference into this Summary Prospectus. You can find the Fund’s statutory prospectus, statement of additional information, reports to shareholders, and other information about the Fund online at www.etf.grizzle.com. You can also get this information at no cost by calling at (800) 617-0004 or by sending an e-mail request to invest@etf.grizzle.com.

Investment Objective

The Grizzle Growth ETF (the “Fund”) seeks capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses⁽¹⁾ (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.75%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.75%

(1) The Fund’s adviser will pay, or require a sub-adviser to pay, all expenses incurred by the Fund (except for advisory fees and sub-advisory fees, as the case may be) excluding interest charges on any borrowings made for investment purposes, dividends and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act, as amended (the “1940 Act”), and litigation expenses, and other non-routine or extraordinary expenses.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$77	\$240	\$417	\$930

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the total annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year ended July 31, 2024, the Fund’s portfolio turnover rate was 85% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund (“ETF”) that invests primarily in equity securities of companies, with a focus on growth, innovation and disruption. The Fund seeks to identify future leaders in the following overarching key growth themes including, but not limited to: Digitization and Cloud Computing, Future Media and Entertainment, Health and Wellness, and Sustainability and Energy Transition. Within these preceding four themes the Fund seeks to invest in the following subsectors including, but not limited to:

Sector/Industry	Theme	Description
Automobile Manufacturers	Electronic Vehicles	Companies in the business of creating electrified vehicles (including hybrid vehicles) and vehicles that run using other renewable sources of energy
Cannabis	Cannabis	Companies that cultivate, distribute and sell cannabis products; Companies that research medical uses for cannabis and create medical formulations of cannabis
Communication Services	Media and Streaming Services	Companies in the business of creating unique media content and/or devices to stream content into homes
Energy	Energy and Energy Transition	Companies engaged in drilling, producing, storing and transporting oil and/or natural gas
Financial Services	Future of Finance	Companies creating novel lending and payment solutions and facilitating such transactions; Companies that are diversifying their offerings and helping investors access new, potentially high-growth investment areas, including cryptocurrency exchanges
Healthcare	Biotechnology and Novel Drug Research and Treatment (including medical psychedelics)	Companies engaged in the genetic manipulation of microorganisms, the manufacturing of medicinal drugs and research and application of novel pharmaceutical formulations (including legally derived psychedelic medicines that bind to specific serotonin receptors and cause changes in perception and cognition in the pursuit of treating mental diseases such as PTSD and clinically resistant depression)
Industrials	Renewable Energy (Wind and Solar)	Companies engaged in building solar power systems and other renewable energy systems (e.g., wind, solar and energy storage)
Information Technology	Software as a Service*, Microprocessors, Robotics, and Autonomous Technologies	Companies that create software programs and computer hardware for corporations and individual consumers and companies that provide equipment, an interconnected system or subsystem of equipment or software that is used in the acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission or reception of data or information
Materials	Green Technology Electric Metals** and Infrastructure	Companies engaged in using new technology to create renewable materials Companies engaged in mining the raw materials that will support the growth in infrastructure and renewable energy ecosystems (e.g., solar panels, battery storage, wind turbines and hydrogen fuel cells)
Media and Entertainment	Esports/Gaming	Companies engaged in video game publishing, creating interactive worlds and e-sports

* Software as a service is a method of software delivery and licensing in which software is accessed online via a subscription, rather than bought and installed on individual computers.

** Electric Metals are metals used in the manufacture of electric vehicles, renewable energy technologies, and other electronics.

Grizzle Investment Management LLC (“Grizzle”), an investment sub-adviser to the Fund, uses proprietary internal fundamental research and analysis to identify companies well-positioned for growth within the targeted sectors. The Fund’s other sub-adviser, Cambria Investment Management, L.P., also provides Grizzle with fundamental research. Grizzle uses its research and fundamental analysis findings to determine the Fund’s industry allocations within each sector and to select individual securities within each industry. Grizzle uses a quantitative screening overlay to identify prospective companies in addition to deep fundamental analysis. Grizzle’s quantitative screening process is described further under “Additional Information about the Fund’s Principal Investment Strategies” below.

The Fund’s portfolio is expected to consist of 30 to 60 equity securities, and may be comprised of common stock and depositary receipts of U.S. and foreign issuers of any market capitalization. The Fund’s exposure to foreign issuers may include issuers in both developed and emerging market countries. Emerging market countries are those countries with low- to middle-income economies as classified by the World Bank or included in any of the Morgan Stanley Capital International (“MSCI”) emerging markets indices. In addition, Grizzle may opportunistically invest in options to both enhance the Fund’s return and seek to provide downside risk protection for specific positions in the Fund’s portfolio. Grizzle uses proprietary valuation models and analysis of historical portfolio profit and loss information to identify favorable risk-managed option trading opportunities, including use of covered calls (selling calls on stock positions in the portfolio) and selling an option and buying another to bet on the direction of a stock while capping both the downside risk (i.e., risk of loss) and upside performance (i.e., limiting participation in any gain).

The Fund's investments in any one sector may exceed 25% of its assets. As of the end of the most recent fiscal year, over 25% of the Fund's assets were invested in securities within the information technology sector.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value per share ("NAV"), trading price, yield, total return and/or ability to meet its investment objective.

Each risk summarized below is considered a principal risk of investing in the Fund, regardless of the order in which it appears.

Growth Investing Risk. Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer's future earnings and revenues. If a company's earnings or revenues fall short of expectations, its stock price may fall dramatically.

Non-Diversification Risk. Because the Fund is non-diversified, it may invest a greater percentage of its assets in the securities of a single issuer or a smaller number of issuers than if it was a diversified fund. As a result, a decline in the value of an investment in a single issuer or a smaller number of issuers could cause the Fund's overall value to decline to a greater degree than if the Fund held a more diversified portfolio. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.

Style Risk. If at any time the market is not favoring the Fund's growth investment style, the Fund's gains may not be as big as, or its losses may be bigger than, those of other funds using different investment styles.

Management Risk. The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that Grizzle's judgments about the attractiveness, value and potential appreciation of particular investments and strategies for the Fund will be correct or produce the desired results or that the Fund will achieve its investment objective. If Grizzle fails to accurately evaluate market risk or appropriately react to current and developing market conditions, the Fund's share price may be adversely affected.

Sector Risks. To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.

- **Automobile Sector.** The Automobiles Industry can be highly cyclical, and companies in the industry may suffer periodic operating losses. The Automobiles Industry also can be significantly affected by labor relations and fluctuating component prices. Companies in the Automobiles Industry, particularly those engaged in the production of electric vehicles may be affected by the obsolescence of existing technology, short product cycles, falling prices and profits, competition from new market entrants and general economic conditions. While most of the major manufacturers are large, financially strong companies, many others are small and can be non-diversified in both product line and customer base. Additionally, developments in automotive technologies (e.g., autonomous vehicle technologies) may require significant capital expenditures that may not generate profits for several years, if any. Companies in the Automobiles Industry may be significantly subject to government policies and regulations regarding imports and exports of automotive products. Governmental policies affecting the Automobiles Industry, such as taxes, tariffs, duties, subsidies, and import and export restrictions on automotive products can influence industry profitability. In addition, such companies must comply with environmental laws and regulations, for which there may be severe consequences for non-compliance. Legislative or regulatory changes and increased government supervision also may affect companies in the Automobiles Industry.

Autonomous and electric vehicle companies typically engage in significant amounts of spending on research and development, capital expenditures and mergers and acquisitions, and there is no guarantee that the products or services produced by these companies will be successful. Companies that produce the raw materials that are used in electric vehicles may be concentrated in certain commodities, and therefore be exposed to the price fluctuations of those commodities. In addition, autonomous vehicle technology could face increasing regulatory scrutiny in the future, which may limit the development of this technology and impede the growth of companies that develop and/or utilize this technology. Autonomous and electric vehicle companies are also potential targets for cyberattacks, which can have a materially adverse impact on the performance of these companies. and electric vehicle companies rely on artificial intelligence and big data technologies for the development of their platforms and, as a result, could face increased scrutiny as regulators consider how the data is collected, stored, safeguarded and used.

- **Cannabis Sector.**

- **United States Regulatory Risks of the Cannabis Industry.** The possession and use of marijuana, even for medical purposes, is illegal under federal and certain states' laws, which may negatively impact the value of the Fund's investments. Use of marijuana is regulated by both the federal government and state governments, and state and federal laws regarding marijuana often conflict. Even in those states in which the use of marijuana has been legalized, its possession and use remains a violation of federal law. Federal law criminalizing the use of marijuana pre-empts state laws that legalize its use for medicinal and recreational purposes. Actions by federal agencies, such as increased enforcement of current federal marijuana laws and the prosecution of nonviolent federal drug crimes by the U.S. Department of Justice (the "DOJ"), could produce a chilling effect on the Cannabis Sector's growth and discourage banks from expanding their services to cannabis companies where such services are currently limited. Any of these outcomes would negatively affect the profitability and value of the Fund's investments and even its ability to pursue its stated investment objective. The conflict between the regulation of marijuana under federal and state law creates volatility and risk for all cannabis companies.

Because marijuana is a Schedule I controlled substance under the Controlled Substances Act (the "CSA"), meaning that it has a high potential for abuse, there is currently no "accepted medical use" for it in the United States, and it lacks accepted safety for use under medical supervision, and may not be prescribed, marketed or sold in the United States. Few drug products containing cannabis or cannabis extracts have been approved for use by the Federal Drug Administration (the "FDA") or obtained registrations for commercial production from the U.S. Drug Enforcement Agency (the "DEA"), and there is no guarantee that such products will ever be legally produced or sold in the United States. Cannabis companies in the United States that engage in research, manufacturing, distributing, importing or exporting, or dispensing controlled substances must be registered (licensed) to perform these activities and have the security, control, recordkeeping, reporting and inventory mechanisms required by the DEA to prevent drug loss and diversion. Failure to obtain the necessary registrations or to comply with necessary regulatory requirements may significantly impair the ability of certain companies in which the Fund invests to pursue medical marijuana research or to otherwise cultivate, possess or distribute marijuana. In addition, because cannabis is a Schedule I controlled substance, Section 280E of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code") applies by its terms to the purchase and sale of medical-use cannabis products and provides that no deduction or credit is allowed for expenses incurred during a taxable year "in carrying on any trade or business if such trade or business (or the activities which comprise such trade or business) consists of trafficking in controlled substances (within the meaning of Schedules I and II of the CSA) which is prohibited by federal law or the law of any state in which such trade or business is conducted." The disallowance of such tax deductions will likely affect the value of cannabis companies.

- **Non-U.S. Regulatory Risks of the Cannabis Industry.** Laws and regulations related to the possession, use (medical and recreational), sale, transport and cultivation of marijuana vary throughout the world, and the Fund will only invest in non-U.S. cannabis companies if such companies are operating legally in the relevant jurisdiction. Even if a company's operations are permitted under current law, they may not be permitted in the future, in which case such company may not be in a position to carry on its operations in its current locations. Additionally, controlled substance legislation differs between countries and legislation in certain countries may restrict or limit the ability of certain companies in which the Fund invests to sell their products.
- **Operational Risks of the Cannabis Industry.** Companies involved in the Cannabis Sector face intense competition, may have limited access to the services of banks, may have substantial burdens on company resources due to litigation, complaints or enforcement actions, and are heavily dependent on receiving necessary permits and authorizations to engage in medical cannabis research or to otherwise cultivate, possess or distribute cannabis. Because the cultivation, possession, and distribution of cannabis is in all circumstances illegal under United States federal law, federally regulated banking institutions may be unwilling to make financial services available to growers and sellers of cannabis.

- **Communications Services Sector.** Companies in the Communications Services Sector are subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals, or the enactment of new adverse regulatory requirements may adversely affect the business of such companies. Companies in the Communications Services Sector also can be significantly affected by intense competition, including competition with alternative technologies such as wireless communications (including with 5G and other technologies), product compatibility, consumer preferences, rapid product obsolescence, and research and development of new products. Technological innovations may make the products and services of such companies obsolete. Media content creation carries risks of changing consumer tastes and running afoul of FCC content guidelines, which could result in large fines or the loss of regulatory licenses. Media companies collect significant amounts of personal consumer data and are at risk of data breaches and fines for the unauthorized and unplanned public release of sensitive consumer data.

- **Energy Sector.** The Energy Sector is comprised of energy, industrial, infrastructure, and logistics companies, and, therefore, the Fund is susceptible to the adverse economic, environmental, business, regulatory, or other occurrences affecting the Energy Sector. The Energy Sector has historically experienced substantial price volatility. At times, the performance of companies within the Energy Sector may lag the performance of companies operating within other sectors or the market as a whole. Companies operating in the Energy Sector are subject to specific risks, including, among others, fluctuations in commodity prices; reduced consumer demand for commodities such as oil, natural gas, or petroleum products; reduced availability of natural gas or other commodities for transporting, processing, storing, or delivering; slowdowns in new construction; extreme weather or other natural disasters; and threats of attack by terrorists on energy assets. Additionally, companies within the Energy Sector are subject to substantial government regulation and oversight and changes in the regulatory environment for energy companies may adversely impact their profitability and thus, the Fund's performance. Over time, depletion of natural gas reserves and other energy reserves also may affect the profitability of energy companies.
- **Financial Services Sector.** The Financial Services Sector can be significantly affected by changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and fallout from the housing and sub-prime mortgage crisis. Insurance companies, in particular, may be significantly affected by changes in interest rates, catastrophic events, price and market competition, the imposition of premium rate caps, or other changes in government regulation or tax law and/or rate regulation, which may have an adverse impact on their profitability. The Financial Services Sector has experienced significant losses in the recent past, and the impact of more stringent capital requirements and of recent or future regulation on any individual financial company or on the sector as a whole cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses.
- **Healthcare Sector.** Companies in the Healthcare Sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, and an increased emphasis on the delivery of healthcare through outpatient services. The costs associated with developing new drugs can be significant, and the results are unpredictable. Newly developed drugs may be susceptible to product obsolescence due to intense competition from new products and less costly generic products. Moreover, the process for obtaining regulatory approval by the FDA or other governmental regulatory authorities is long and costly and there can be no assurance that the necessary approvals will be obtained or maintained. The values of many companies in the Healthcare Sector also are dependent on the development, protection and exploitation of intellectual property rights and other proprietary information, and the profitability of these companies may be significantly affected by such things as the expiration of patents or the loss of, or the inability to enforce, intellectual property rights.
- **Industrials Sector.** Companies in the Industrials Sector can be significantly affected by supply and demand for specific products or services and for Industrials Sector products in general; a decline in demand for products due to rapid technological developments and frequent new product introduction; government regulation, world events and economic conditions; and the risks associated with potential environmental damage and product liability claims.
- **Information Technology Sector.** Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Information technology companies and companies that rely heavily on technology also may be prone to operational and information security risks resulting from cyber-attacks and/or technological malfunctions.
- **Materials Sector.** Companies in the Materials Sector may be adversely impacted by the volatility of commodity prices, changes in exchange rates, depletion of resources, over-production, litigation and changes in government regulations, among other factors.

- **Media and Entertainment Sector.** Media and entertainment companies, including companies engaged in the design, production or distribution of goods or services for the media and entertainment industries (including video game publishing, creating interactive worlds and e-sports) may become obsolete quickly. Media and entertainment companies are subject to risks that include cyclicalities of revenues and earnings, a decrease in the discretionary income of targeted individuals, changing consumer tastes and interests, fierce competition in the industry and the potential for increased government regulation. Media and entertainment company revenues largely are dependent on advertising spending. A weakening general economy or a shift from online to other forms of advertising may lead to a reduction in discretionary spending on online advertising. Additionally, competitive pressures and government regulation can significantly affect and entertainment companies.
- **Psychedelics Sector.** Psychedelics companies are subject to various laws and regulations that may differ at the state/local and federal levels. These laws and regulations may significantly affect a psychedelics company's ability to secure financing, impact the market for psychedelics business sales and services, and set limitations on psychedelics use, production, transportation, and storage. There can be no guarantees that such approvals or administrative actions will happen or be favorable for psychedelics companies, and such actions may be subject to lengthy delays, and may require length and expensive clinical trials. Additionally, therapies containing controlled substances may generate public controversy. Political and social pressures and adverse publicity could lead to delays in approval of, and increased expenses for, psychedelics companies and any future therapeutic candidates they may develop. All of these factors and others may prevent psychedelics companies from becoming profitable, which may materially affect the value of certain Fund investments. In addition, psychedelics companies are subject to the risks associated with the biotechnology and pharmaceutical industries.

In Canada, certain psychedelic drugs, including psilocybin, are classified as Schedule III drugs under the Controlled Drugs and Substances Act (the "CDSA") and, as such, medical and recreational use is illegal under Canadian federal law. In the United States, most psychedelic drugs, including psilocybin, are classified as Schedule I drugs under the CSA and the Controlled Substances Import and Export Act (the "CSIEA") and, as such, medical and recreational use is illegal under the U.S. federal laws. There is no guarantee that psychedelic drugs will ever be approved as medicines in either jurisdiction.

In the United States, DEA scheduling determinations removing a substance from Schedule I are dependent on FDA approval of a substance or a specific formulation of a substance for a therapeutic or medicinal use. Unless and until psilocybin, psilocin, or other psychedelics-based products receive FDA approval, such products are prohibited from sale, which limits the growth opportunities for certain portfolio companies of the Fund. Even if approved by the FDA, the manufacture, importation, exportation, domestic distribution, storage, sale, and legitimate use of such products will continue to be subject to a significant degree of regulation by the DEA. There can be no guarantee that such approvals or administrative actions will happen or be favorable for psychedelics companies. Such actions may be subject to lengthy delays and may require lengthy and expensive clinical trials. Additionally, therapies containing controlled substances may generate public controversy and carry reputational risk. Political and social pressures and adverse publicity could lead to delays in approval of, and increased expenses for, psychedelics companies and any future therapeutic candidates they may develop. Psychedelics companies also are subject to the risks associated with the Biotechnology and Pharmaceutical Industries. In addition, because certain psychedelic drugs, including psilocybin, are a Schedule I controlled substance, Section 280E of the Internal Revenue Code applies by its terms to the purchase and sale of such psychedelic drugs and provides that no deduction or credit is allowed for expenses incurred during a taxable year "in carrying on any trade or business if such trade or business (or the activities which comprise such trade or business) consists of trafficking in controlled substances (within the meaning of Schedules I and II of the CSA) which is prohibited by federal law or the law of any state in which such trade or business is conducted." The disallowance of such tax deductions will likely affect the value of psychedelic drug-related companies. All of these factors and others may prevent psychedelics companies from becoming profitable, which may materially affect the value of certain Fund investments.

Foreign Securities Risk. Investments in securities or other instruments of non-U.S. issuers involve certain risks not involved in domestic investments and may experience more rapid and extreme changes in value than investments in securities of U.S. companies. Financial markets in foreign countries often are not as developed, efficient, or liquid as financial markets in the United States, and therefore, the prices of non-U.S. securities and instruments can be more volatile. In addition, the Fund will be subject to risks associated with adverse political and economic developments in foreign countries, which may include the imposition of economic sanctions. Generally, there is less readily available and reliable information about non-U.S. issuers due to less rigorous disclosure or accounting standards and regulatory practices.

Derivatives Risk. Derivatives are financial instruments that derive value from the underlying reference asset or assets, such as stocks, bonds, commodities, currencies, funds (including ETFs), interest rates or indexes. The Fund's investments in derivatives may pose risks in addition to, and greater than, those associated with directly investing in securities or other ordinary investments, including risk related to the market, imperfect correlation with underlying investments or the Fund's other portfolio holdings, higher price volatility, lack of availability, counterparty risk, liquidity, valuation and legal restrictions. The use of derivatives is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The use of derivatives may result in larger losses or smaller gains than directly investing in the underlying reference asset(s). Because derivatives often require only a limited initial investment, the use of derivatives may expose the Fund to losses in excess of those amounts initially invested. In addition, the Fund's investments in derivatives are subject to the following risks:

- **Options Risk.** The prices of options may change rapidly over time and do not necessarily move in tandem with the price of the underlying securities. Selling call options reduces the Fund's ability to profit from increases in the value of the Fund's equity portfolio, and purchasing put options may result in the Fund's loss of premiums paid in the event that the put options expire unexercised. To the extent that the Fund reduces its put option holdings relative to the number of call options sold by the Fund, the Fund's ability to mitigate losses in the event of a market decline will be reduced.

Counterparty Risk. Counterparty risk is the likelihood or probability that a party involved in a transaction might default on its contractual obligation. Where the Fund enters into derivative contracts that are exchange-traded, the Fund is subject to the counterparty risk associated with the Fund's clearing broker or clearinghouse. Relying on a counterparty exposes the Fund to the risk that a counterparty will not settle a transaction in accordance with its terms and conditions because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem, thus causing the Fund to suffer a loss. If a counterparty defaults on its payment obligations to the Fund, this default will cause the value of an investment in the Fund to decrease. In addition, to the extent the Fund deals with a limited number of counterparties, it will be more susceptible to the credit risks associated with those counterparties.

Depository Receipt Risk. Depository receipts involve risks similar to those associated with investments in foreign securities and give rise to certain additional risks. Depository receipts listed on U.S. or foreign exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares.

Emerging Markets Risk. The Fund may invest indirectly, via ADRs, in securities issued by companies domiciled or headquartered in emerging market nations. Investments in securities traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, currency, or regulatory conditions not associated with investments in U.S. securities and investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Fund Shares and cause the Fund to decline in value.

Equity Market Risk. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stock and debt obligations, because common stockholders generally have inferior rights to receive payment from specific issuers. The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, or sectors in which the Fund invests.

Underlying ETFs Risks. The Fund will incur higher and duplicative expenses because it invests in other ETFs ("Underlying ETFs"). There is also the risk that the Fund may suffer losses due to the investment practices of the Underlying ETFs. The Fund will be subject to substantially the same risks as those associated with the direct ownership of securities held by the Underlying ETFs. Additionally, the market price of the shares of an Underlying ETF in which the Fund invests will fluctuate based on changes in the net asset value as well as changes in the supply and demand of its shares in the secondary market. It is also possible that an active secondary market for an Underlying ETF's shares may not develop, and market trading in the shares of the Underlying ETF may be halted under certain circumstances. Underlying ETFs are also subject to the ETF Risks described below.

ETF Risks.

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that are authorized to purchase and redeem Shares directly from the Fund (known as "Authorized Participants" or "APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services; or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions or other charges imposed by brokers and bid-ask spreads, which is the cost of the difference between the price at which an investor is willing to buy Shares and the price at which an investor is willing to sell Shares, which varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity.. Due to the costs of buying or selling Shares, frequent trading of Shares may reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund may trade on foreign exchanges that are closed when the Fund's primary listing exchange is open, the Fund is likely to experience premiums and discounts greater than those of ETFs holding only domestic securities.
- *Trading.* Although Shares are listed for trading on a national securities exchange, such as The Nasdaq Stock Market, LLC (the "Exchange"), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's portfolio holdings, which can be significantly less liquid than Shares.

Geographic Investment Risk. To the extent the Fund invests a significant portion of its assets in the securities of companies of a single country or region, it is more likely to be impacted by events or conditions affecting that country or region.

- *Canada-Specific Risk.* Because investments in the metals and mining industry may be geographically concentrated in Canadian companies or companies that have a significant presence in Canada, investment results could be dependent on the financial condition of the Canadian economy. The Canadian economy is reliant on the sale of natural resources and commodities, which can pose risks such as the fluctuation of prices and the variability of demand for exportation of such products. Changes in spending on Canadian products by the economies of other countries or changes in any of these economies may cause a significant impact on the Canadian economy.

General Market Risk. Economies and financial markets throughout the world are becoming increasingly interconnected, which increases the likelihood that events or conditions in one country or region will adversely impact markets or issuers in other countries or regions. Securities in the Fund's portfolio may underperform in comparison to securities in the general financial markets, a particular financial market or other asset classes, due to a number of factors, including inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters or events, pandemic diseases, terrorism, regulatory events, and government controls.

High Portfolio Turnover Risk. The Fund may actively and frequently trade all or a significant portion of the securities in its portfolio. A high portfolio turnover rate increases transaction costs, which may increase the Fund's expenses. Frequent trading may also cause adverse tax consequences for investors in the Fund due to an increase in short-term capital gains.

Market Capitalization Risk.

- *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
- *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large capitalization stocks or the stock market as a whole. Some medium capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large-capitalization companies.
- *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of larger-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some small capitalization companies have limited product lines, markets, and financial and managerial resources and tend to concentrate on fewer geographical markets relative to large- or mid-capitalization companies. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies. Small-capitalization companies also may be particularly sensitive to changes in interest rates, government regulation, borrowing costs and earnings.

Market Events Risk. The Fund’s investments are subject to changes in general economic conditions, general market fluctuations and the risks inherent in investment in securities and other financial instruments. Investment markets can be volatile and prices of investments can change substantially due to various factors including, but not limited to, economic growth or recession, changes in interest rates, inflation (or expectations of inflation), deflation (or expectations of deflation), changes in the actual or perceived creditworthiness of issuers, general market liquidity, regulatory events, other governmental trade or market control programs and related geopolitical events. In addition, the value of the Fund’s investments may be negatively affected by the occurrence of global events such as war, terrorism, environmental disasters, natural disasters or events, country instability, and infectious disease epidemics or pandemics. Conflict, loss of life and disaster connected to ongoing armed conflict between Ukraine and Russia in Europe and between Israel and Hamas in the Middle East could have severe adverse effects on the related region, including significant adverse effects on the regional or global economies and the markets for certain securities. The U.S. and the European Union have imposed sanctions on certain Russian individuals and companies, including certain financial institutions, and have limited certain exports and imports to and from Russia. These conflicts have contributed to recent market volatility and may continue to do so.

Models and Data Risk. When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Some of the models used to construct the Fund are predictive in nature. The use of predictive models has inherent risks. For example, such models may incorrectly forecast future behavior, leading to potential losses. In addition, in unforeseen or certain low-probability scenarios (often involving a market disruption of some kind), such models may produce unexpected results, which can result in losses for the Fund. Furthermore, because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data.

Performance

The Fund is the successor to the investment performance of the Grizzle Growth ETF, a former series of Listed Funds Trust (the “Predecessor Fund”), as a result of the reorganization of the Predecessor Fund into the Fund on August 25, 2023 (the “Reorganization”). Prior to the Reorganization, the Fund had not yet commenced operations. Accordingly, any performance information for periods prior to the close of business on August 25, 2023, is that of the Predecessor Fund. The Predecessor Fund had the same investment objective and investment strategies, and similar policies as the Fund since the Predecessor Fund’s inception.

The following performance information provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance over time. The following bar chart shows the Fund’s annual returns. The table illustrates how the Fund’s average annual returns for the 1-year and since inception periods compare with those of a broad measure of market performance. The Fund’s past performance, before and after taxes, does not necessarily indicate how the Fund will perform in the future. Updated performance information is available on the Fund’s website at www.etf.grizzle.com.

Calendar Years Ended December 31,

During the period of time shown in the bar chart, the Fund’s highest quarterly return was 14.34% for the quarter ended June 30, 2023, and the lowest quarterly return was -18.64% for the quarter ended June 30, 2022.

The performance information shown above is based on a calendar year. The Fund’s performance from January 1, 2024 through September 30, 2024 was 18.82%.

**Average Annual Total Returns
For the Period Ended December 31, 2023**

	1 Year	Since Inception (12/16/2021)
Return Before Taxes	33.30%	5.05%
Return After Taxes on Distributions	33.20%	4.84%
Return After Taxes on Distributions and Sale of Shares	19.79%	3.84%
S&P 500 Index (reflects no deduction for fees, expenses, or taxes)	26.29%	2.72%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account (“IRA”) or other tax-advantaged accounts.

Management

Investment Adviser

Tidal Investments LLC (the “Adviser”) serves as investment adviser to the Fund.

Investment Sub-Adviser

Grizzle Investment Management LLC (“Grizzle”) serves as investment sub-adviser to the Fund.

Investment Sub-Adviser

Cambria Investment Management, L.P. (“Cambria”) serves as investment sub-adviser to the Fund.

Portfolio Managers

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund.

Thomas George, CFA, a founder and portfolio manager of Grizzle, has been a portfolio manager of the Fund since its inception 2023, and of the Predecessor Fund since its inception in December 2021

Scott Willis, CFA, a founder and portfolio manager of Grizzle, has been a portfolio manager of the Fund since its inception 2023, and of the Predecessor Fund since its inception in December 2021

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for U.S. cash.

Shares are listed on a national securities exchange, such as the Exchange, and individual Shares may only be bought and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and ask prices is often referred to as the “bid-ask spread.”

Information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.etf.grizzle.com.

Tax Information

Fund distributions can be taxable to shareholders as ordinary income, qualified dividend income, or capital gains (or some combination thereof) unless your investment is in an individual retirement account (“IRA”) or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary such as a bank (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products including the Fund or for other activities, such as marketing, educational training, or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements will not result in increased Fund expenses, ask your salesperson or visit the Intermediary’s website for more information.
